	III Semester				
	B. Tech. (Artificial Intelligence & Data Science) 3AD4-03: Data Structures and Algorithms				
	Credit: 3 Max. Marks: 100 (IA:30, ETE:70)				
	3L+0T+ 0P     End Term Exams: 3 Hours				
Cours	e Objectives:				
1. 2. 3. 4. Cours CO1:	To understand the basic concepts of data structures and algorithms. To differentiate linear and non-linear data structures and the operations upon them. Ability to perform sorting and searching in a given set of data items. To comprehend the necessity of time complexity in algorithms. To comprehend the necessful completion of the course the students will be able to Understanding the fundamental analysis and time complexity for a given problem.				
	Articulate linear & non data structures and legal operations permitted on them.				
	Applying a suitable algorithm for searching and sorting. Understanding graph algorithms, operations, and applications and the importance of hashing.				
	Application of appropriate data structures to find solutions to practical problems.				
S. No.	Contents	Hours			
1	<b>Introduction to Algorithms and Analysis:</b> Fundamentals of algorithm analysis, Space and time complexity of an algorithm, Types of asymptotic notations and orders of growth, Algorithm efficiency – best case, worst case, average case, Analysis of non-recursive and recursive algorithms.				
2	<b>Linear Data Structures:</b> Array- 1D and 2D array, Stack - Applications of stack: Expression Evaluation - Conversion of Infix to postfix and prefix expression, Tower of Hanoi. Queue - Types of Queues: Circular Queue, Double Ended Queue (deQueue), Applications – Priority Queue using Arrays - List - Singly linked lists – Doubly linked lists - Circular linked lists, Applications -Polynomial Addition/Subtraction				
3	<b>Sorting and Search Techniques:</b> Sorting Algorithms: Basic concepts, Bubble Sort, Insertion Sort, Selection Sort, Quick Sort, Shell Sort, Heap Sort, Merge Sort, Counting Sort, External Sorting, Internal Sorting, Stable & Unstable Sorting. Searching: Linear Search, Binary Search.				
4	<b>Trees:</b> Terminology, Binary Tree – Terminology and Properties, Tree Traversals, Expression Trees – Binary Search Trees – operations in BST – insertion, deletion, Searching. AVL Trees-Insertion, deletion and Rotation in AVL Trees	7			
5	<b>Graphs &amp; Hashing:</b> Basic definition and Terminology – Representation of Graph – Graph Traversal: Breadth First Search (BFS), Depth First Search (DFS) - Minimum Spanning Tree: Prim's, Kruskal's- Single Source Shortest Path: Dijkstra's Algorithm. Hashing: Introduction, open hashing-separate chaining, closed hashing - linear probing, quadratic probing, double hashing, random probing, rehashing, Recent Trends in Data Structures and Algorithms

	III Semester	
	B. Tech. (Artificial Intelligence & Data Science)	
	3AD4-04: Object Oriented Programming using C++	
	Credit: 3 Max. Marks: 100 (IA:30, ETE:70)	
	3L+0T+ 0P End Term Exams: 3 Hours	
	e Objectives:	
	To develop a problem-solving approach using object-oriented programming paradigms.	
	To learn basic concepts and structure syntax of OOP using C++.	
	To learn & implement robust programming using error handling techniques.	
	e Outcomes:	
	uccessful completion of the course, the students will be able to Jnderstand the requirement and benefits of object-oriented programming languages.	
	Jnderstand the requirement and benefits of object-oriented programming languages.	
	Understand the memory management in object-oriented programming language using C++.	
	Inderstand and implement polymorphism using different ways such as function and operator over	rloading.
	Learn and implement exception handling mechanism for robust software development in C++.	
S. No.	Contents	Hours
	Introduction: Introduction OOP, Procedural Vs. Object Oriented Programming, Principles of	7
	OOP, Benefits and applications of OOP. Overview, Program structure, namespace, identifiers,	
	variables, constants, enum, operators, typecasting, control structures, Operators, array and	
	pointer.	
2	Abstraction mechanism: Classes, private, public, constructors, destructors, member data,	7
	member functions, inline function, friend functions, static members, and references.	
	Inheritance: Class hierarchy, derived classes, single inheritance, multiple, multilevel, hybrid	
	inheritance, role of virtual base class, constructor and destructor execution, base initialization	
3	using derived class constructors. <b>Polymorphism:</b> Binding, Static binding, Dynamic binding, Static polymorphism: Function	7
5	Overloading, Ambiguity in function overloading, Dynamic polymorphism: Base class pointer,	/
	object slicing, late binding, method overriding with virtual functions, pure virtual functions,	
	abstract classes	
4	<b>Operator Overloading:</b> This pointer, applications of this pointer, Operator function, member	7
	and nonmember operator function, operator overloading, I/O operators. Exception handling:	
	Try, throw, and catch, exceptions and derived classes, function exception declaration,	
	unexpected exceptions, exception when handling exceptions, resource capture and release.	
5	Memory Management: Dynamic memory management, new and delete operators, object	5
	copying, copy constructor, assignment operator, virtual destructor.	
6	Template: template classes, template functions. Standard Template Library: Fundamental	7
	idea about string, iterators, hashes, iostreams and other types. Namespaces: user defined	
	namespaces, namespaces provided by library. Object Oriented Design, design and	
	programming, role of classes.	40

III Semester					
<b>B. Tech. (Artificial Intelligence &amp; Data Science)</b>					
3AD4-21: Data Structures and Algorithms Lab					
Credit:1.5	Max. Marks: 100 (IA:60, ETE:40)				
0L+0T+ 3P	End Term Exams: 3 Hours				
Course Objectives:					
1. To implement an algorithm for a proble	em and analyze its time and space complexity.				
2. To implement the algorithm for Searchi	ing (Linear and Binary).				
3. To implement the algorithms for the dif	fferent types of sorting.				
4. To implement algorithms for different	type of sorting and compare their performance in terms of the				
space and time complexity					
Prerequisites: Computer Programming knowle					
Course Outcomes: Upon successful completion					
<b>CO1</b> : Be able to design and analyze the time an	1 5				
CO2: Understand the concept of static & Dynamics					
<b>CO3</b> : Be capable to identity the appropriate dat	<b>č</b>				
CO4: Have practical knowledge on the applicat					
	ive List of Experiments				
1. Write a program to find the mean and the m					
2. Write a program to insert one element in an					
3. Write a program to Linear & Binary search					
	by 10 students in 5 courses in a two- dimensional array.				
	d list, including insertion, deletion and searching in the linked				
list.					
	inked list in reverse order without disturbing the linked list.				
7. Write a program to reverse a linked list.					
8. Write a program to add two polynomials usi					
	ked list including insertion, deletion and searching in the linked				
list.	on amore and linked list				
10. Write a program to implement a stack using 11. Write a program to implement a queue using					
12. Write a program to implement a circular que					
13. Write a program to implement a priority que					
14. Write a program to implement a double-end					
	es of sorting. (Bubble, Insertion, Quick, Selection, Merge, Heap)				
	nd display its preorder, inorder and postorder traversals.				
17. Write a program to perform insertion, deleti					
18. Write a program to construct a graph.	on and searching in binary search free.				
19. Write a program to calculate the distance be	stween two vertices in a granh				
20. Write a program to calculate the distance be	<b>U</b>				
20. write a program to calculate the distances of 21. graph.	etween every pair of vertices in a				
22. Write a program to construct a minimal span	nning tree of a granh

III Semester						
<b>B. Tech. (Artificial Intelligence &amp; Data Science)</b>						
3AD4-22: Object Ori	ented Programming using C++ Lab					
Credit: 1.5	Max. Marks: 100 (IA:60, ETE:40)					
0L+0T+ 3P	0L+0T+ 3P					
Course Objectives:						
1. To develop programs in C++ using obje						
2. To design class, object using syntax of (						
	nted mechanism (Encapsulation, Polymorphism, Inheritance,					
Abstraction) using C++.						
Course Outcomes: Upon successful completio	n of the course/Lab the students will be able to					
<b>CO-1:</b> Hands on practice of basic C++ syntax.						
CO-2: Hands on practice of class, object and ab						
<b>CO3:</b> Hands on practice of inheritance using cl						
<b>CO4:</b> Hands on practice of function and operate						
	mechanism for robust software development in C++.					
	ve List of Experiments					
	s covering the syllabus of Object-Oriented Programming using					
	the suggested list of experiments covering entire syllabus of					
Object-Oriented Programming using C++.						
	gers and determines and prints if the first is a multiple of the					
second.						
	the side of a square and then prints a hollow square of that size					
out of asterisks and blanks. Your program should work for squares of all side sizes between 1 and 20.						
For example, if your program reads a size	ze of 5, it should print					
****						
* *						
* *						
* *						
****						

- 3. Write a program that reads in a five-digit integer and determines whether it is a palindrome.
- 4. Write a program that computes the value of  $e^x$  by using the formula

$$e^x = 1 + \frac{x}{1!} + \frac{x^2}{2!} + \frac{x^3}{3!} + \dots$$

- 5. Write a program that defines four functions to round a number x in various ways:
  - a. roundToInteger( number )
  - b. roundToTenths( number )
  - c. roundToHundredths( number )
  - d. roundToThousandths( number )
  - For each value read, your program should print the original value, the number rounded to the nearest integer, the number rounded to the nearest tenth, the number rounded to the nearest hundredth and the number rounded to the nearest thousandth.
- Write a function *gcd* that returns the greatest common divisor of two integers. 6.
- 7. Write a program to solve the Towers of Hanoi problem. Use a recursive function with four parameters: a. The number of disks to be moved
  - b. The peg on which these disks are initially threaded
  - c. The peg to which this stack of disks is to be moved
  - d. The peg to be used as a temporary holding area
- 8. Write a program that inputs a line of text, tokenizes the line with function strtok and outputs the tokens in reverse order. (e.g. for input "Hello dear students" output will be "students" "dear" "Hello")

Approved by ...... academic council meeting held on ......

Office: Bikaner Technical University, Bikaner

Karni Industrial Area, Pugal Road, Bikaner-334004; Website: https://btu.ac.in Page 12

- a) *Addition* of two Complex numbers: The real parts are added together and the imaginary parts are added together.
- b) *Subtraction* of two Complex numbers: The real part of the right operand is subtracted from the real part of the left operand and the imaginary part of the right operand is subtracted from the imaginary part of the left operand. c) *Printing Complex numbers* in the form (a, b) where a is the real part and b is the imaginary part.
- 10. Implement overloading of *operator*+ to allow operations such as *string1* = *string2* + *string3*
- 11. Consider class Complex in problem 9,
  - a) Modify the class to enable input and output of complex numbers through the *overloaded* >> *and* << *operators*, respectively
  - b) *Overload the multiplication operator* to enable multiplication of two complex numbers as in algebra.
  - c) *Overload the == and != operators* to allow comparisons of complex numbers
- 12. Write a program to develop hierarchy of inheritance for the properties of shapes and their relevant functions.

e.g. Shapes  $\rightarrow$  2D/3D, 2D  $\rightarrow$  ellipse  $\rightarrow$  circle|rectangle  $\rightarrow$  square and expand it for 3D accordingly.

- 13. Write a simple function template for predicate function *isEqualTo* that compares its two arguments with the equality operator (==) and returns true if they are equal and false if they are not equal. Use this function template in a program that calls *isEqualTo* only with a variety of built-in types. Now write a separate version of the program that calls *isEqualTo* with a user defined class type, but does not overload the equality operator.
- 14. Use inheritance to create a base exception class and various derived exception classes. Then show that a catch handler specifying the base class can catch derived-class exceptions.
- 15. Write a program which shows that all destructors for objects constructed in a block are called before an exception is thrown from that block.
- 16. Write a program that shows a constructor passing information about constructor failure to an exception handler after a try block.

	III Semester					
B. Tech. (Artificial Intelligence & Data Science)						
3AD4-23: Linux and Shell Programming Lab						
Credit:1	Max. Marks: 100 (IA:60, ETE:40)					
0L+0T+ 3P	End Term Exams: 3 Hours					
Course Objectives:						
1. To make familiar with open-source of	perating system, command line interface, basic commands of					
Unix/Linux						
2. To able to write scripts containing varie						
	ncepts of control structures of shell programming					
	l of scripts with loops, functions, arrays, etc					
Prerequisites: Computer Programming knowle						
<b>CO1:</b> To experiment with various basic comm	on of the course/Lab the students will be able to ands, redirection and input/output of UNIX based operating					
systems.	inds, redirection and input/output of OTMA based operating					
<b>CO2:</b> To develop shell scripts for various built	in commands of UNIX					
	s of programming like loops, conditions, operators etc specific					
to Shell Programming.						
CO4: To develop shell scripts to perform tasks	varying from simple to complex level.					
	ive List of Experiments					
	dir, rmdir, cd, cat, banner, touch, file, wc, sort, cut, grep, dd,					
dfspace, du, ulimit.						
2. Commands related to inode, I/O redirection a						
	ntrol structure- If-then-fi, if-thenelse-if, nested if-else, to find:					
3.1 Greatest among three numbers.						
<ul><li>3.2 To find a year is leap year or not.</li><li>3.3 To input angles of a triangle and fir</li></ul>	d out whather it is valid triangle or not					
3.4 To check whether a character is alp						
3.5 To calculate profit or loss.	nubel, eight of special character.					
4. Shell Programming - Looping- while, until, f	or loops					
4.1 Write a shell script to print all even						
4.2 Write a shell script to print table of						
4.3 Write a shell script to calculate fact						
4.4 Write a shell script to print sum of a						
4.5 Write a shell script to print sum of o	•					
5. Shell Programming - case structure, use of bi						
-	calculator which performs addition, subtraction, Multiplication,					
division	a waalt					
5.2 Write a shell script to print days of 5.3 Write a shell script to print starting						
6. Shell Programming - Functions	4 monuns navnig 51 days.					
6.1 Write a shell script to find a numbe	r is Armstrong or not					
6.2 Write a shell script to find a numbe						
6.3 Write a shell script to print Fibonac	•					
6.4 Write a shell script to find prime number.						
6.5 Write a shell script to convert binar						
-	Diamond, triangle, square, rectangle, hollow square etc.					
8. Shell Programming – Arrays						
8.1 Write a Shell script to read and prin	t elements of array.					
8.2 Write a Shell script to find sum of a	-					
8.3 Write a Shell script to find reverse	÷					
8.4 Write a Shell script to search an ele	ment in an array.

programming model including registers, ins		
	on size and functions to write a given assembly language	
program.	nearty of mamory and I/O interfacing	
<ol> <li>Design a given interfacing system using con</li> <li>Demonstrate the features of advance microp</li> </ol>		
Course Outcomes: Upon successful completio		
<b>CO1:</b> Ability to write assembly language progra		
	am for Arithmetic calculation using register pair.	
	am for interfacing with Programmable peripheral devices.	
CO4: Assembly language programming for gen	eral purpose problems like traffic light controller, control the	
speed of step motor etc.		
	guage and interfacing with PPI and see outputs on CRO and	
other electronic devices.		
	ve List of Experiments	
1. Study the hardware, functions, memory kit.	structure, Instruction set and operation of 8085 microprocessor	
2. Write an assembly language program to	Add/Subtract two 8-bit/16-bit number.	
	Data transfer/Exchange from one memory block to another in	
forward and reverse order.		
	generate a square wave of 1khz frequency on the SOD pin of	
8085. Operating frequency of 8085 is 3		
5. Write an assembly language program to (i) BCD to ASCII	perform following conversion:	
<ul><li>(i) BCD to ASCII</li><li>(ii) BCD to Hexadecimal.</li></ul>		
	r Sorting of array(Ascending/Descending), Searching a number	
in array, find largest/smallest number in		
•	similar to 8085 which will compute all arithmetic and logic,	
memory and control instruction(you have	ve to introduce addressing mode in ISA )	
	nimal set of ISA(experiment number 7) which will perform all	
computation and implement using FPGA	Α

		Python Programming Lab	
-	Credit: 1.5	Max. Marks: 100 (IA:60, ETE:40)	
C	0L+ 0T+ 3P End Term Exams: 3 Hours		
	e Objectives:	has and multiple and a	
	To provide skills for designing algorit	6	
		programming applications using Python.	
	** *	ure & python programming code in problem solving.	
	se Outcomes:	tu danta milli ha ahla ta	
	successful completion of the course the st Demonstrate and understanding of progr		
	: Identify and abstract the programming ta		
	Design and develop modular programming a		
<b>CO-4:</b> Trace and debug a program.			
<b>S.</b> No.		Contents	
1	Installation of Python, and learning in	teractively at command prompt and writing simple programs.	
2	Perform Creation, indexing, slicing, con	ncatenation, and repetition operations on Python built-in data	
	types: Strings, List, Tuples, Dictionary, Set		
3	Solve problems using decision and looping statements		
4	Handle numerical operations using math and random number functions		
5	Create user-defined functions with different types of function arguments.		
6	Perform File manipulations- open, close	e, read, write, append and copy from one file to another.	
7	Matrix addition, multiplications, and unity matrix.		
8	Text processing using python, Import a	CSV file and perform various Statistical and Comparison	
	operations on rows/columns.		
9		Functions. Manipulation of NumPy arrays- Indexing,	
	Slicing, Reshaping, Joining, and Splitti	ing.	
10	Programs related to python libraries like	e Numpy, Pandas, Scipy etc.

IV Semester		
B. Tech. (Artificial Intelligence & Data Science)		
4AD4-24: Java Programming Lab		
Credit: 1.5 Max. Marks: 100 (IA:60, ETE:40)		
0L+ 0T+ 3P End Term Exams		
Course Objectives:		
1. To write programs using abstract classes		
2. To write multithreaded programs.		
3. To write GUI programs in Java.		
4. To impart hands on experience with java programming.		
Course Outcomes:		
Upon successful completion of the course the students will be able to		
CO-1: Implement the features of Java such as operators, classes, objects, inheritance	e, packages and exception	
handling		
<b>CO-2:</b> Design problems using latest features of Java like garbage collection, Consol	e class, Network interface,	
APIs		
<b>CO-3:</b> Develop competence in Java through the use of multithreading, Applets etc		
CO-4: Apply advance concepts like socket and database connectivity, and develop p	project based on industry	
orientation		
S. No. Contents		
1 WAP in Java to show implementation of classes.		
2 WAP in Java to show implementation of inheritance.	lish	
3 WAP in Java to show Implementation of packages and interfaces. To accord	npiisn	
<ul> <li>4 WAP in Java to show Implementation of threads.</li> <li>5 WAP in Java Using exception handling mechanisms.</li> </ul>		
<ul> <li>6 WAP in Java Osing exception handning mechanisms.</li> <li>6 WAP in Java to show Implementation of Applets.</li> </ul>		
<ul> <li>WAP in Java to show Implementation of Applets.</li> <li>WAP in Java to show Implementation of mouse events, and keyboard event</li> </ul>		
8 WAP in Java to show Implementation of model events, and Reyboard event 8 WAP in Java to show Implementing basic file reading and writing methods.	5.	
<ul> <li>9 Using basic networking features, WAP in Java To accomplish</li> </ul>		
10 WAP in Java to show Connecting to Database using JDBC.		
11 Project work: A desktop based application project should be designed and in	nnlemented in java	
11 110jeet work. A desktop based application project should be designed and n	inplemented in Java.
