**B. Tech. (Artificial Intelligence & Data Science)**

**7AD4-01: Deep Learning, NLP and Generative AI**

**Credit: 3**  
**3L+0T+0P**

**Max. Marks: 150(IA:30, ETE:120)**  
**End Term Exam: 3 Hours**

SN	Contents	Hours
1	<b>Introduction to Neural Networks</b> Introduction of artificial neural network and deep learning, characteristics of neural networks terminology, neurons, perceptron, backpropagation, Basic learning laws, Activation and Loss function - Function approximation, applications	7
2	<b>Improving Deep Neural Networks</b> Training a deep neural network, hyper-parameter tuning, Hidden layers, Generalization Gap – Under-fitting Vs Over-fitting – Optimization, Normalization	7
3	<b>Introduction to Convolution Neural Networks</b> CNN Architecture and Operations, convolutional layer, Pooling layer, Variants of the Convolution Model <b>Introduction to Recurrent Networks</b> Recurrent Neural Networks - Bidirectional RNNs, Encoder, Decoder, Sequence-to-Sequence Architectures, Deep Recurrent Networks, Auto encoders, LSTM , Gated RNNs.	10
4	<b>Basic Overview of Natural Language Processing:</b> Various stages of NLP, Text Preprocessing, Language Modelling and Large Language Models, Applications of NLP	8
5	<b>Basic Overview of Generative AI:</b> A basic introduction to Generative AI, Background on Generative AI, Generative Adversarial Networks, Transformers, diffusion models, Stable Diffusion <b>Basic overview of Generative AI models:</b> OpenAI models (ChatGPT, GPT 4.0, DALL-E 2), Google Bard, Microsoft models ( CoDi, Kosmos-2)	8
		40

**Max Marks: 100 (IA :60, ETE:40)**  
**End Term Exams: 2 hr**

<b>Exp. No.</b>	<b>List of Experiments</b>
<b>1</b>	Demonstration and implementation of Shallow architecture using Python, TensorFlow and Keras i) Google Colaboratory - Cloning GitHub repository, Upload Data, Importing Kaggle's dataset, Basic File operations ii) Implementing Perceptron, iii) Digit Classification: Neural network to classify MNIST dataset
<b>2</b>	Basic implementation of a deep Learning models in PyTorch and Tensor Flow. Tune its performance by adding additional layers provided by the library.
<b>3</b>	Implement custom operations in PyTorch by using deep learning via gradient descent; recursive chain rule (backpropagation); bias-variance tradeoff, regularization; output units: linear, softmax; hidden units: tanh, RELU.
<b>4</b>	Implement a simple CNN starting from filtering, Convolution and pooling operations and arithmetic of these with Visualization in PyTorch and Tensorflow.
<b>5</b>	ConvNet Architectures: Implement a famous convNet architectures - AlexNet, ZFNet, VGG, C3D, GoogLeNet, ResNet, MobileNet-v1.
<b>6</b>	Convolution Neural Network application using TensorFlow and Keras, i) Classification of MNIST Dataset using CNN ii) Face recognition using CNN
<b>7</b>	Image denoising (Fashion dataset) using Auto Encoders Handling Color Image in Neural Network aka Stacked Auto Encoders (Denoising)
<b>8</b>	Text processing, Language Modeling using RNN
<b>9</b>	Time Series Prediction using RNN
<b>10</b>	Sentiment Analysis using LSTM
<b>11</b>	Image generation using GAN

**4<sup>th</sup> Year - VII Semester**  
**B. Tech. (Artificial Intelligence & Data Science)**

**3L+ 0T+ 0P**

**End Term Exams: 3 hr**

SN	Contents	Hours
1	<b>Basic Properties of time-series data:</b> Distribution and moments, Stationarity, Autocorrelation, Heteroscedasticity, Normality <b>Introduction of Time Series Analysis:</b> Introduction to Time Series and Forecasting, Different types of data, Internal structures of time series. Models for time series analysis, Examples of Time series Nature and uses of forecasting, Forecasting Process, Data for forecasting, Resources for forecasting.	7
2	<b>Statistics Background For Forecasting:</b> Graphical Displays, Time Series Plots, Plotting Smoothed Data, Numerical Description of Time Series Data, Use of Data Transformations and Adjustments, General Approach to Time Series Modelling and Forecasting, Evaluating and Monitoring Forecasting Model Performance. <b>Random walk model:</b> Non-stationarity and unit-root process, Drift and Trend models	7
3	<b>Autoregressive models and forecasting:</b> Autocorrelation and Partial autocorrelation, Autoregressive Moving Average (ARMA) Models , Autoregressive Integrated Moving Average (ARIMA) Models, Forecasting using ARIMA , Seasonal Data, Seasonal ARIMA Models Forecasting using Seasonal ARIMA Models <b>Introduction to Vector Auto-regressive (VAR) models:</b> Impulse Response Function (IRF), Error Correction Models, Co-integration, Vector ARIMA Models, Vector AR (VAR) Model <b>Model Selection Criteria:</b> Finding the “BEST” Model , Impulse Response Function to Study the Differences in Models Comparing Impulse Response Functions for Competing Models .	10
4	<b>Time Series Regression Model:</b> Introduction Least Squares Estimation in Linear Regression Models, Statistical Inference in Linear Regression, Prediction of New Observations, Model Adequacy Checking, Variable Selection Methods in Regression, Generalized and Weighted Least Squares, Regression Models for General Time Series Data, Exponential Smoothing, First order and Second order.	8
5	<b>Multivariate Time Series Models and Forecasting:</b> Multivariate Time Series Models and Forecasting, Multivariate Stationary Process <b>Panel data models:</b> Fixed-Effect and Random-Effect models Introduction to Neural Networks and Forecasting Spectral Analysis, Bayesian Methods in Forecasting, Principal Component Analysis (PCA) and Factor Analysis	10

<b>Exp. No.</b>	<b>List of Experiments</b>
1	Implement the following Data structures in Java i) Linked Lists                      ii) Stacks    iii) Queues    iv) Set            v) Map
2	Perform setting up and Installing Hadoop in its three operating modes: Standalone, Pseudo distributed, Fully distributed.
3	Implement the following file management tasks in Hadoop: Adding files and directories Retrieving files Deleting files Hint: A typical Hadoop workflow creates data files (such as log files) elsewhere and copies them into HDFS using one of the above command line utilities.
4	Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
5	Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather a large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record-oriented.
6	Implement Matrix Multiplication with Hadoop Map Reduce
7	Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
8	Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes.
9	Solve some real life big data problems.
